2. In online voting application, implement following functionalities.
    - Create register.html that input user details from end user and post it to registration servlet.
    - The registration servlet will store details in database and show appropriate message to end user.
    - Create ResultServlet to display information of all candidates. Upon admin successful login, redirect it to ResultServlet.
    - In ResultServlet provide link to new candidate page. Create newcandidate.html to input candidate details from end user and post it to add candidate servlet.
    - Add candidate servlet will add these details in database and redirect to result servlet.
